

PERSONAL INFORMATION Alessandro Beghini

POSITION

Associate Professor at the University of Milan, Faculty of Medicine, (BIO/11) - Molecular Biology.

PERSONAL STATEMENT

My research interests are focused on cancer molecular genetics, and particularly on the oncogenic signaling networks involved in the development of Acute Leukemia. In this scientific context, I obtained the first evidence for the involvement of the KIT gene in the human Acute Myeloid Leukemia and particularly the peculiar association with core binding factor deranged-related neoplasms. The diagnostic/prognostic value of KIT mutations has been recognized in the definition of molecular genetic alterations affecting clinical outcome of patients (WHO, 2008). Another exciting area of research, that stems from my work on hematological malignancies, examines the gene expression programs involved in the early development of cancer stem cell. The overall focus in my ongoing research lies on the characterization of the Wnt-mediated molecular events involved in the onset and progression of cancer, with a particular focus on acute leukemia. I stably interact with haematologists within the University hospital in Milan, through the Lombardy Hematology Network (REL), and in strict collaboration with the Niguarda Cancer Center to facilitate knowledge exchange on translational medicine between academia, public health and caring sciences. My translational aims are focused to develop a better and deep diagnostic/prognostic definition, and on therapeutic implications based on cancer drug targets.
