

Using EPM to Elevate Privileges and Install Applications on UniSID Devices

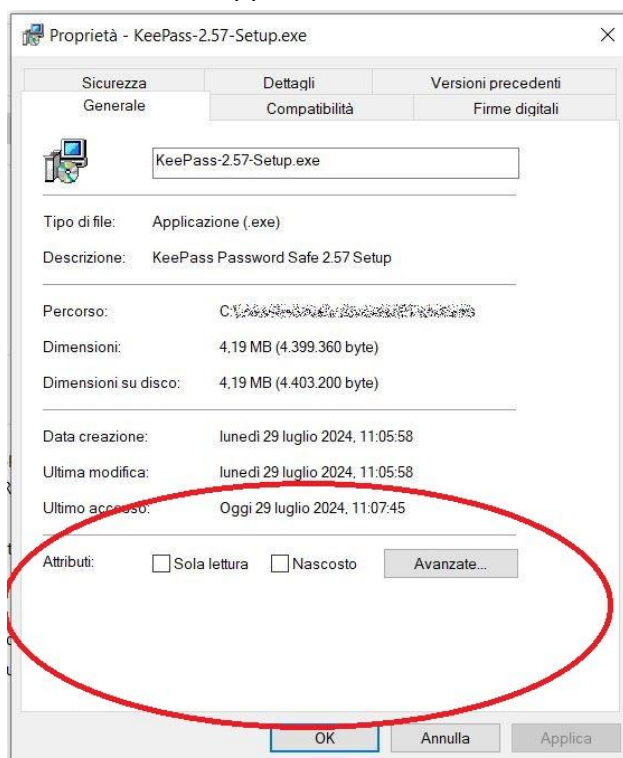

The **EPM (Endpoint Privilege Management)** feature complements the range of installable applications on UniSID devices, already available on the Corporate Portal, which remains the reference point for university applications, as they are verified and secure.

Using EPM, users can autonomously install and/or run applications that require administrative privileges, including both executable files (.exe) and Microsoft Installer packages (.msi).

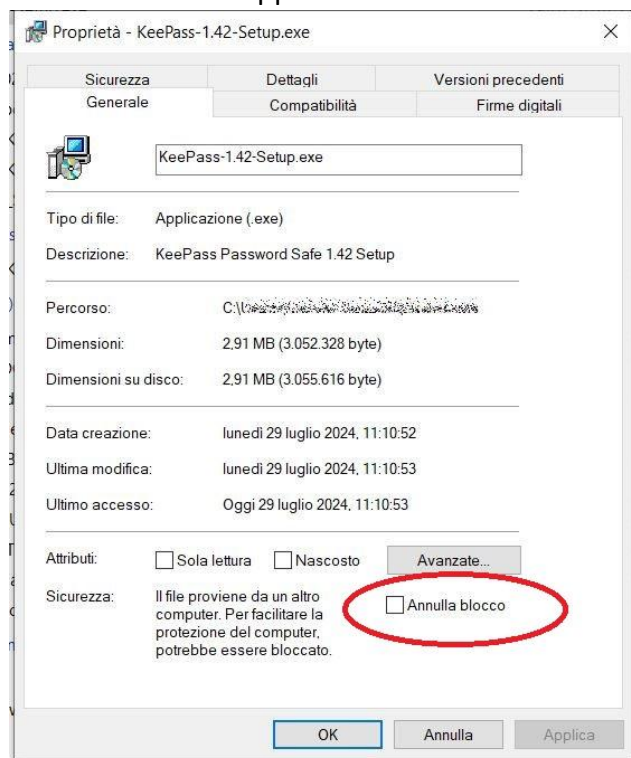

How to Install an Application with EPM

1. **Right-click** on the application you want to run and select **Properties**.
2. Check if the application is **blocked**.

App not blocked

App blocked

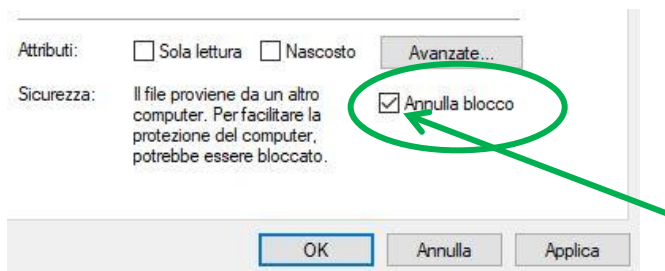

UNIVERSITÀ DEGLI STUDI DI MILANO

Direzione ICT

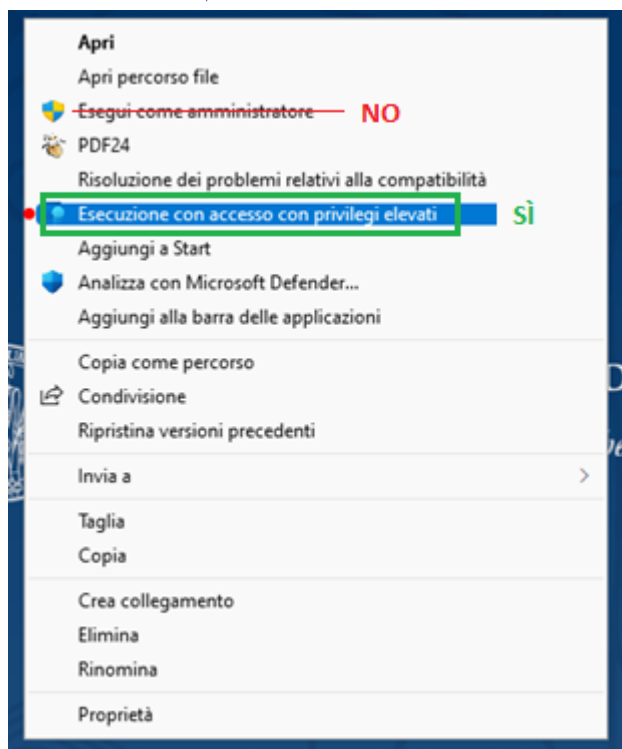

Settore UNISID - Servizi ICT per gli Ambienti di lavoro delle Direzioni e di Dipartimenti

3. If the screen shows the option **Unblock**, the app is blocked:
Activate the **Unblock** checkbox and click **OK**.

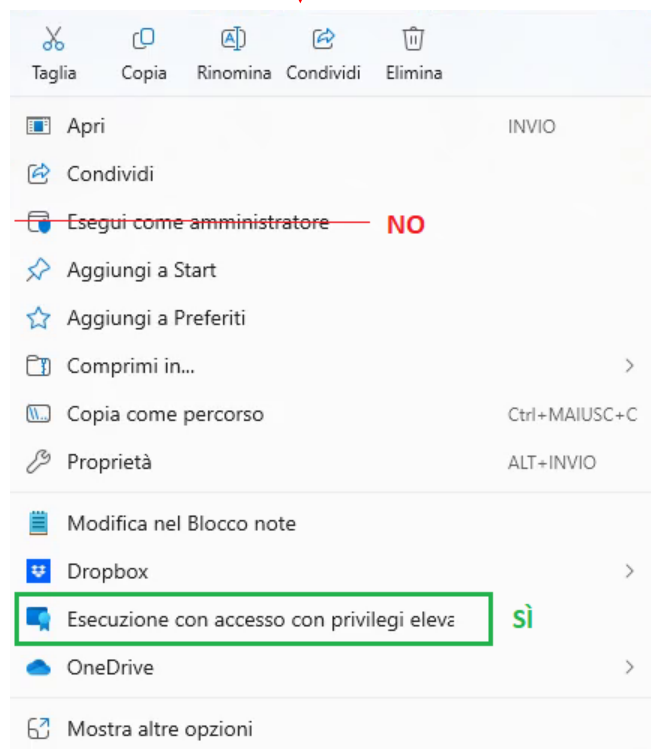

4. Right-click again on the application and, from the context menu, click on “**Run with elevated privileges**”:

in Windows 10

b. in Windows 11

On Windows 11 systems, this option may be hidden under “Show more options”.

Note: As shown in the previous images, do not click “Run as administrator”.

Verrà richiesto di verificare l'identità. Dopo la verifica, sarà possibile accedere come amministratore a questa app.

Queste informazioni verranno inviate all'amministratore IT dell'organizzazione. [Informazioni](#)

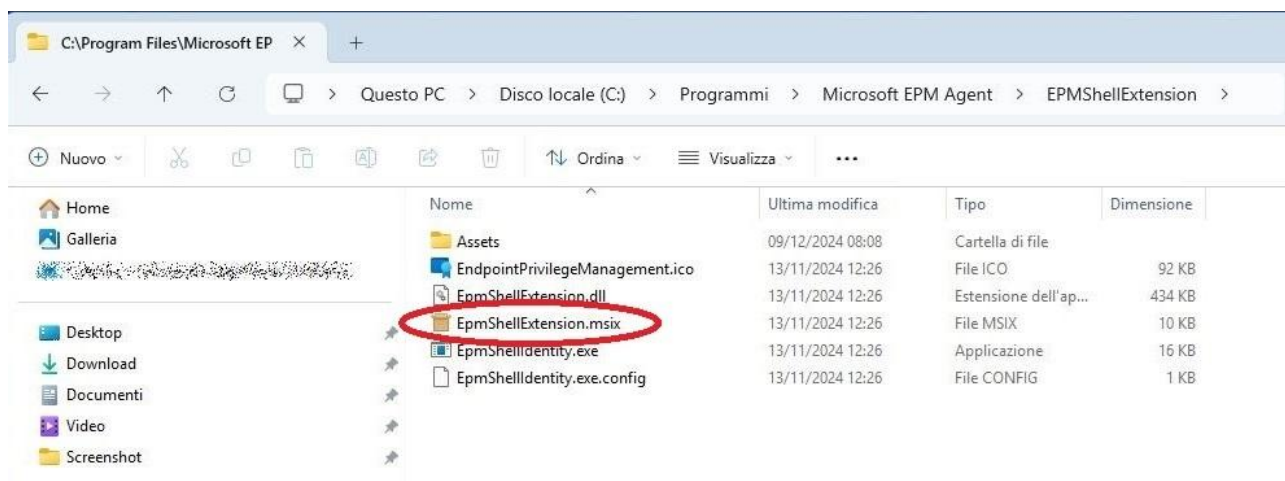

Annulla Continua

- Enter your credentials to complete the elevation process.
- End.

If “Run with elevated privileges” Is Missing

If the “Run with elevated privileges” option is not visible in the context menu:

- Navigate to the folder “C:\Program Files\Microsoft EPM Agent\EPMSHellExtension” and click on “EpmShellExtension.msix”.
